Establishing and implementing the organization's comprehensive informatics system in line with strategic policies is one of the main tasks of the information technology unit. In this regard, the use of new information technology technologies that speed up data extraction, clarification and validation of data accuracy are on the agenda of the unit.
Creating, maintaining and maintaining a suitable platform for carrying out the current affairs of the organization using information technology is one of the other duties of the information technology unit. Moving in the direction of converting quantitative and qualitative criteria into data, in the direction of increasing the decision-making power of managers and finally reaching the highest goals of the organization is one of the priorities of the information technology unit.
